

**Additional Information:

- The current FARR Bracket Design aligns with current FM180.org specs that are aligned with offerings from Paragon Machine Works based off the adapted FM140 to FM160 dimensions.
- Shimano FM180 is adapted off of this mounting dimension. There are still no direct FM180 specs from shimano as of 20/21 Technical Specifications.
- All have the same dimensional offsets from the dropout face inward.
